

Cuban Burger Website Critique:

- URL: <https://www.cubanburger.com/>
- Visual Style:
 - This site's visual style is good because it is organized and interesting.
 - There is a picture of people drinking and having a good time for customer appeal and there are pictures of the people who manage the restaurant which gives a nice personal touch.
 - There is also a picture of a stone/brick wall that breaks up the sections of text so it's not too cluttered.
 - There are also some text/picture animations as you scroll down, which looks cool.
 - Some of the text placement and color isn't the best, but it's not too bad.
- Usability:
 - Nothing seems to be broken on this site so the usability is good.
 - This website is split up into 6 pages (Home, Menu, About, Team, Employment, & Order delivery) each with different graphics and information.
 - These are all linked on a banner at the top of the screen so each page is accessible no matter what page you are currently on.
- Desktop vs. Mobile Comparison:
 - Both versions of this website look similar and contain the same information, which is good.
 - Some fields look better on the mobile version (ex. Team & Hours) because they are naturally column oriented.
 - Other fields such as large blocks of text don't look that good though because it's condensed and looks cluttered.
- Network Throttling:
 - When network throttling is turned on, the website struggles to display so users with low-speed internet would definitely have trouble ordering from here.
